[Laboratory glass pestle with plastic coated handle]

Extra small pestle made of laboratory glass, for crushing and grinding fine samples and powdery solid substances. Suitable for laboratory-scale applications in the pharmaceutical or pharmacy sector, e.g. for preparing analyses.
Sturdy round glass rod with molded-on rough friction surface. Good comminution can be achieved by movements of the plunger with slight pressure.

Material: Clean Save laboratory glass DIN ISO 3585
transparent • food safe • smooth surfaces • temperature resistant

"Protect save" polyamide coating natural,
To reduce the risk of injury, the handle is plastic-coated as "impact splinter protection on the outer casing".
Use temperature up to 60°C
